Pre- Interview Assignment

Position Title:	**Job ID:**
Senior Health Workforce Analyst	247465

15-Minute Technical Presentation: Health Workforce Modelling

You have been asked to develop a quantitative model to forecast workforce supply and workforce requirements for a regulated health profession in Ontario over the next 10 years. For the purposes of this exercise, workforce requirements refer to the workforce needed to meet projected population and health service needs.

Prepare a 15-minute presentation describing your approach and how the results would inform health workforce policy and planning.

In your presentation:

a) Define the analytical and policy questions your model would address, including how you would conceptualize workforce supply, requirements and geographic distribution.

b) Describe your proposed modelling methodology, including how you would model workforce inflows and outflows, population and service requirements, and key assumptions.

c) Identify the data sources, variables and indicators you would use, and explain how you would address data quality, gaps and privacy considerations.

d) Explain how you would assess model uncertainty, including the use of scenarios or sensitivity analysis.

e) Describe how you would interpret and communicate the results, limitations and policy implications to senior management, including how the analysis would inform potential government action.
